

# Kwick Download Hybrid

## Aumtech's Merchant Service Solution

### USP

- ◆ It is based on latest hybrid cloud technology
- ◆ DMS Integration – matter of minutes
- ◆ MBD Integration – matter of minutes
- ◆ Training Time – Over a cup of coffee

### PROTECTION

- ◆ Your DMS data resides with you in your premises
- ◆ KD Hybrid allows you to maintain / administer and build files into your DMS using hybrid cloud technology
- ◆ Any work done offline is migrated into live system in just a single click

- KD Hybrid seamlessly integrates into your DMS servers like \*Termmaster, \*Vericenter, \*Nurit, \*Dejavoo and more
- Use any smart device, connect to Aumtech's KD Hybrid on the cloud and build terminal files into any of your DMS. Use the same to administer the templates and customize the same as well
- You have volumes of terminal file builds in DMS and wish to migrate it to KD Hybrid, no worries, click a button and all data would get automatically migrated
- Models / Templates / Applications are setup in your DMS. Do not worry about redoing the setup in KD Hybrid again, it will auto pickup all info

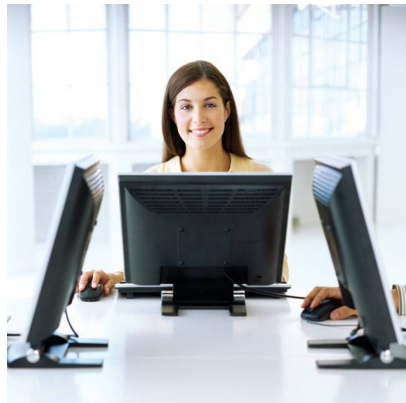

### YOUR CURRENT PAIN POINTS

If you are an MSP or Service center managing DMS (Download Management Systems) administration and file builds then these would be known issues

- Spending innumerable hours in meeting up with your merchant service levels with your tech staff struggling to keep up with multiple DMS administration and file builds.
- Your DMS administrators have to ensure 100% physical presence at your tech station and regular training of file builders for all DMS clients.
- Every hardware, software upgrade or patches bring in nightmarish activities.
- Every time your middleware system is down, you have to spend twice the time in syncing the same with DMS environment.
- Every Model /Template / Application / Cluster setup / maintenance activities involves the same set of steps to be done twice and is completely manual, once on DMS server and then on middleware system
- Your successful file builds are dependent on third party components which are usually not updated by author companies with every new release
- Spending regular high valued maintenance fee without any technology or product updates from middleware solution companies
- Unable to utilize the benefits of new technology like smart devices due to existing old architecture of middleware system
- Maintain extra inventory of client license components of DMS which adds to the overhead of time, cost and resources
- Middleware expecting opening of crucial ports which are direct threat to data security

# Data Sheet

## CBA

- ◆ Cost of implementation – Less than half the price of what you have invested in current solution
- ◆ Zero AMC Cost
- ◆ Zero License renewal fee
- ◆ No perpetual long term contract

## OTHER AUMTECH PRODUCTS

- GETI certified complete merchant acquiring RAD ERP suite called KARES
- Kwick Secure – Secure confidential data real time with AES 256 encryption and key management
- Intelli Biz – A Business Intelligence tool for MSP / ISO / Agents

## AUMTECH SERVICES

- Consulting
- Product Development
- Technology Managed Services

## Smart Features

- No COM / DCOM ports needs to be opened  
Password encryption using AES256
- Not dependent on OS dependent Message Queues or Service Broker of a RDBMS
- 100% secure and complaint with smart devices
- Multi tenanted in architecture with access profile definition based on the same, so you can allow your ISOs and Agents to build files as well
- Real time MIS of trend of DMS built with charts
- Power users have access to both admin and end user components and have the ability to have Single Sign On and switch between sites with a click of mouse

## Product Administration

### Features

- Define Model / App / Template again in the middleware system
- Define VC cluster in middleware
- Define and setup DEF files every time you setup application
- Import Manager of TM or third party component of VC and NCC
- Server infra for middleware
- Middleware and DMS in same domain

### Current System
